ACADEMIC POSITIONS

Tuck School of Business, Dartmouth College

Associate Professor of Business Administration (without tenure), July 2022 - Present

Daniel R. Revers T'89 Faculty Fellow, July 2022 – June 2023

Assistant Professor of Business Administration, July 2018-June 2022

Harvey H. Bundy III T'68 Faculty Fellow, July 2021- June 2022

EDUCATION

Katz Graduate School of Business, University of Pittsburgh

Ph.D., Marketing. 2018

Brandeis University

B.A., Cum Laude, Psychology (Highest Honors) and Anthropology. 2013

AWARDS AND HONORS

- American Marketing Association Summer Conference, Co-chair, 2024
- CB Track Chair for Working Papers, Asia-Pacific Association for Consumer Research Conference, 2024
- AMS Sheth Foundation Best Paper Award Finalist, 2020
- AMA-EBSCO Responsible Research in Marketing Award Finalist, 2020-21
- AMA-MRSIG Don Lehmann Award, Honorable Mention for best dissertation-based paper in the Journal of Marketing or the Journal of Marketing Research in 2019
- Invited Marketing Strategy Consortium Fellow, 2020
- John A. Howard AMA Doctoral Dissertation Award Honorable Mention, 2018
- AMA-Sheth Foundation Doctoral Consortium Fellow, 2017
- Ben L. Fryrear Competitive Student Fellowship for 5th Year Funding, 2017-2018
- MSI Research Grant for \$4,000, 2017
- Robert Perloff Doctoral Student Award, 2017
- MSI Alden G. Clayton Dissertation Proposal Honorable Mention, 2016
- AMA CBSIG Rising Star Award, 2016-2017
- University of Pittsburgh Honors College: Student Honoree, 2015
- Women in Marketing Leadership Conference – invited participant, 2015
- Qualtrics Behavioral Research Grant, 2015
- Sheth Fund Recipient, 2015, 2016, 2017
- Roger S. Albrandt Sr. Fellowship Award, 2013 – 2017
- Small Dean's Research Grants, University of Pittsburgh, 2013, 2014, 2015, 2016, 2017
- Research Circle on Democracy and Cultural Pluralism Grant, Brandeis University, 2013

CONFERENCE PRESENTATIONS (*presenter)

APPENDIX: PUBLISHED PAPER ABSTRACTS AND DATA COLLECTION INFORMATION

1. ***Grewal, Lauren** and ***Helen van der Sluis**, “Hidden Barriers to Marketplace Disability Accessibility: An Empirical Analysis of the Role of Perceived Trade-Offs” Forthcoming at the *Journal of Consumer Research*.

Disability is a basic human condition that affects a significant proportion of the world’s population, yet many disability- and accessibility-relevant issues remain pressing and insufficiently addressed. With three experiments, the current research investigates potential reasons why marketplace disability accessibility has not been universally accepted. Potential barriers to greater accessibility in marketplaces may arise because such efforts appear at odds with other salient priorities, at micro (i.e., consumer) and macro (i.e., firm, policy, or societal) levels. In the proposed framework, micro-level trade-offs prompt perceptions of personal cost and macro-level trade-offs prompt perceptions of firm morality. In turn, these perceptions mediate firm evaluations, showing consumers at baseline respond negatively to accessibility. Critically, however, several practical interventions emerge from these processes. Simple framing choices that emphasize who benefits, and what the purpose of the offering is, mitigate consumers’ negative responses to accessibility. Demonstrating one way to better understand perceptions of the full spectrum of the consumer population, this research provides pathways for consumer researchers to further delve into disability-related research in the future.

**The first author collected the data for study 1 on MTurk using CloudResearch in spring 2023 and the data for study 2a on Prolific Academic in winter 2023. The first author and second author collected the data for study 2b in their respective behavioral labs in fall 2022. The first author collected the data for study 2b's pretest on Prolific Academic in fall 2022. The second author analyzed the data in studies 1 and 2a with input from the first author, and the two authors jointly analyzed the data in study 2b and the pretest for study 2b. The data are currently stored in a project directory on the Open Science Framework.*

2. Herhausen, Dennis, **Lauren Grewal**, Krista Hill Cummings, Anne Roggeveen, Francisco V. Ordenes, and Dhruv Grewal (2023), "Complaint Deescalation Strategies on Social Media," *Journal of Marketing*, 87 (2), 210–231.

Existing literature offers multiple suggestions for how to recover from service failures, though without explicitly addressing customers' negative, high arousal states, evoked by the failure. The few studies that address ways to improve negative emotions after failures focus on face-to-face interactions only. Because most customers today prefer social media complaining, firms must learn how to effectively deescalate negative, high arousal emotions through text based exchanges to achieve successful service recoveries. With three field studies using natural language processing tools, and three preregistered controlled experiments, the current research identifies ways to mitigate negative arousal in text-based social media complaining, specifically, active listening and empathy. In detail, increasing active listening and empathy in the firm response evokes gratitude among customers in high arousal states, even if the actual failure is not (yet) recovered. These findings provide a new theoretical perspective on the role of customer arousal in service failures and recoveries, as well as managerially relevant implications for dealing with public social media complaints.

**The data collection for Study 1a and 2 was supervised by the first author, the data collection for Study 1b, 3a, and 3b was supervised by the second author, and the data collection for Study 4 was supervised by the fifth author. The first author analyzed the data for Study 1a, 2, and 4, and the first and second author independently analyzed the data for Study 1b, 3a, and 3b.*

3. **Grewal, Lauren**, Eugenia C. Wu, and Keisha M. Cutright (2022), "Loved As-Is: How God Salience Lowers Interest in Self-Improvement Products," *Journal of Consumer Research*, 49 (1), 154-174.

Consumers often desire to become better versions of themselves. Reflecting this interest in self-improvement, the marketplace offers consumers a wide range of products and services that promise to improve or better the consumer in some way. But, in a world with unlimited opportunities to spend one's time and money, what influences whether consumers will invest in products that enable self-improvement? We demonstrate that the degree to which God is salient has a negative effect on individuals' preferences for consumption choices with self-improvement features compared to equally attractive options that do not include such features. We propose that this is because thoughts of God activate a greater sense of being loved for who you are ("loved 'as-is'"), making self-improvement a lower priority. We demonstrate this basic effect across several experiments as well as archival data, provide process evidence through mediation and moderation, and address alternative explanations. We also identify important boundary conditions: God salience is less likely to decrease interest in self-improvement products when consumers do not believe in God, and when God is considered to be a punishing (vs. loving) entity.

**The first, second, and third authors all contributed to the collection of data. Studies 2, 3a, 3b, 4, 5, and the study in WA K were all preregistered with approval from all three authors and run using CloudResearch, MTurk, and Prolific Academic between September 2020 and September 2021. The study in Web Appendix J was collected in 2018 on MTurk. The first author collected and analyzed the data in all studies with input from the second and third authors. The pilot data were aggregated solely by a data scientist who is a full-time member of the first author's school's Research Computing Group. The first author subsequently analyzed this data. All experimental data is stored on Open Science Framework.*

4. *Appel, Gil, ***Lauren Grewal**, *Rhonda Hadi, and *Andrew T. Stephen (2020), "The Future of Social Media in Marketing," *Journal of the Academy of Marketing Science*, 48 (1), 79 - 95.

Social media allows people to freely interact with others and offers multiple ways for marketers to reach and engage with consumers. Considering the numerous ways social media affects individuals and businesses alike, in this article, the authors focus on where they believe the future of social media lies when considering marketing-related topics and issues. Drawing on academic research, discussions with industry leaders, and popular discourse, the authors identify nine themes, organized by predicted imminence (i.e., the immediate, near, and far futures), that they believe will meaningfully shape the future of social media through three lenses: consumer, industry, and public policy. Within each theme, the authors describe the digital landscape, present and discuss their predictions, and identify relevant future research directions for academics and practitioners.

5. ***Grewal, Lauren**, *Jillian Hmurovic, Cait Lamberton, and Rebecca Walker Reczek (2019), "The Self-Perception Connection: Why Consumers Devalue Unattractive Produce," *Journal of Marketing*, 83 (1), 89 – 107.

This research investigates the mechanism by which the aesthetic premium placed on produce contributes to consumers' rejection of safe, edible, yet aesthetically unattractive, fruits and vegetables, which results in both financial loss to retailers and food waste. Further, the authors identify a novel way in which the devaluation of such produce can be reduced. Five experiments demonstrate that consumers devalue unattractive produce because of altered self-perceptions: merely imagining the consumption of unattractive produce negatively affects how consumers view themselves, lowering their willingness to pay for unattractive produce relative to equivalently safe but more attractive alternatives. This discrepancy in willingness to pay for unattractive versus attractive produce can be reduced by altering the self-diagnostic signal of consumer choices and boosting consumers' self-esteem. An experiment in the field demonstrates the effectiveness of using easily implementable in-store messaging to boost consumers' self-esteem in ways that increase consumers' positive self-perceptions and, subsequently, their willingness to choose unattractive produce. This research, therefore, suggests low-cost yet effective strategies retailers can use to market unattractive produce, potentially raising retailer profits while reducing food waste.

**The data for study 1 was collected during spring 2016 and the data for study 4b was collected during summer of 2018 by the co-first authors from Mechanical Turk. Study 2 was collected from undergraduate students at the Ohio State University during winter 2017 by research assistants working under the supervision of the fourth author. Study 3 data was collected from undergraduate students at the University of Pittsburgh in spring 2017 where collection was conducted by research assistants working under the supervision of the co-first authors. The data for study 4a was collected by an independent research consultant in a grocery store in Sweden. The analyses in all studies were performed by the co-first authors under the supervision of the third and fourth author.*

6. **Grewal, Lauren** and Andrew T. Stephen (2019), "In Mobile We Trust: The Effects of Mobile Versus Non-Mobile Reviews on Consumer Purchase Intentions," *Journal of Marketing Research*, 56 (5), 791-808.

In the context of user-generated content (UGC), mobile devices have made it easier for consumers to review products and services in a timely manner. In practice, some UGC sites indicate if a review was posted from a mobile device. For example, TripAdvisor uses a "via mobile" label to denote reviews from mobile devices. However, the extent to which such information affects consumers is unknown. To address this gap, the authors use TripAdvisor data and five experiments to examine how mobile devices influence consumers' perceptions of online reviews and their purchase intentions. They find that knowing a review was posted from a mobile device can lead consumers to have higher purchase intentions. Interestingly, this is due to a process in which consumers assume mobile reviews are more physically effortful to craft and subsequently equate this greater perceived effort with the credibility of the review.

** The data for study 1a and 5 were collected by an independent organization under the supervision of, and analyzed jointly by, the first and second author. Studies 1b, 2a, 2b, 3, 4, and in the web appendix, were collected on Amazon's Mechanical Turk between fall 2016 and spring 2018 by the first author. The analyses in the experiments were performed by the first author under the supervision of the second author.*

7. **Grewal, Lauren**, Andrew T. Stephen, and Nicole Verrochi Coleman (2019), "When Posting About Products in Social Media Backfires: The Negative Effects of Consumer Identity-Signaling on Product Interest," *Journal of Marketing Research*, 56 (2), 197 - 210.

Consumers frequently express themselves by posting about products on social media. Because consumers can use physical products to signal their identities, posting about products on social media may be a way for consumers to virtually signal identity. The authors propose that there are conditions in which this action can paradoxically reduce a consumer's subsequent purchase intentions. Five experiments demonstrate that posting products on social media that are framed as being identity-relevant can reduce a consumer's subsequent purchase intentions for the same and similar products, as this action allows consumers to virtually signal their identity, fulfilling identity-signaling needs.

Fortunately for retailers, the authors suggest theoretically and managerially relevant moderators that attenuate this negative effect on intent to purchase. These findings have important implications for how firms can conduct social media marketing to minimize negative purchase outcomes.

**The data for study 1, 3, and 4 were collected from undergraduate students at the University of Pittsburgh from fall 2016 to spring 2017. For studies 1, 3, and 4, data collection was conducted by research assistants working under the supervision of the behavioral lab manager and the first author. The data for studies 2, 5, and the web appendix were collected on Amazon's Mechanical Turk between summer 2016 and summer of 2017 by the first author. The data from Pinterest in the web appendix was scraped by the first author during spring-summer 2017. The analyses in all studies were performed by the first author under the supervision of the second author. The third author was not involved in any data collection or analysis.*
